SKILLS

Skills: JavaScript, Html, CSS, React JS, Redux/Thunk, Bootstrap, React-hook-form, REST API,

EXPERIENCE

LockTrust

May 2022 – Present

Front-end Developer

Nashik, Maharashtra

- Development of a resume parsing and data visualization project over a 2-years period
- Analyzing customer needs and designing a technical solution
- Developing a layout of the application and UI/UX designing
- front-end architecture using React
- Bootstrap for Cascade style sheet
- Coding, testing, and implementing commits, builds, and updates in React JS environment
- Developing and maintaining Git repository and establishing a great collaboration among the cross-functional development team
- Dividing the task into small parts and engaging with the entire development team

PROJECTS

Application Tracking System

- Led the development of a resume parsing and data visualization project over a 2-year period
- Designed and implemented the user interface from scratch, focusing on intuitive and responsive designs for displaying extracted resume information
- Developed and integrated 20+ interactive filters and visualization components to enhance data granularity, including location, work experience, and skills
- Collaborated closely with backend developers to seamlessly integrate crypto transaction analysis features into the frontend
- Played a key role in both strategic planning and hands-on coding, ensuring a cohesive and user-friendly experience

Fintech Application Product with POS

- **Developed a multi-user application** with four distinct user roles: Admin, ISO, UW, Frt, and Merchant, ensuring seamless interaction and role-specific access within the system.
- **Implemented a dynamic form submission process** where Merchants can fill out applications, UW users verify the details, and Admin users review and approve, streamlining the workflow.
- **Integrated POS and inventory management** features, providing a comprehensive solution for Merchant operations within the application.
- **Integrated POS and inventory management** features, providing a comprehensive solution for Merchant operations within the application.
- **Managed state and asynchronous actions using Redux/Thunk, ensuring efficient data handling and UI updates across the application.**
- **Designed and enforced access control mechanisms** for Merchants, including sub-merchant management, to restrict access based on predefined project roles and permissions

Electric Vehicle

- **Developed an Electric Vehicle conversion website**, offering services to convert traditional engine vehicles to electric, enhancing the customer experience in sustainable transportation.
- Implemented features for customer communication, allowing users to specify service details and upload their location for more personalized and efficient service delivery.
- **Designed a user-friendly interface**, enabling customers to easily navigate the service options and interact with the conversion process.

EDUCATION

Relevel by Unacademy

Front-end Web development

Yews National Senior College

BCA (Bachelor Computer Application)
